however sometimes many testers were get confused in common software terminologies. Few days back one of colleague was taking interview of Software tester of 2 years experience. In the interview he asked one question “**What is difference between Test Case and Test Scenarios**” (https://www.softwaretestingclass.com/what-is-difference-between-test-cases-vs-test-scenario/).” then that guy was confused on the answering the question and unable to answer question properly. So I thought to shed some light on basic software testing terminologies.

In today's article we will talk about definitions of Test Case and Test Scenarios and we will see the basic differences between **Test Cases vs Test Scenarios**.

Test Case is 'How to be tested' and Test Scenario is 'What to be tested'

So take a quick look at the **Definition of Test Cases and Test Scenarios**:

Test Case

(http://en.wikipedia.org/wiki/Test_case): A test case is a set of conditions or variables under which a tester will determine whether an application, software system or one of its features is working as it was originally established for it to do.

Test Scenario: The exhaustive testing is not possible due to large number of data combinations and large number of possible paths in the software. **Scenario testing** is to make sure

that end to end functionality of application under test is working as expected. Also check if the all business flows are working as expected.

In scenario testing tester need to put his/her foot in the end users shoes to check and perform the action as how they are using application under test. In scenario testing the preparation of scenarios would be the most important part, to prepare the scenario tester needs to consult or take help from the client, stakeholder or developers.

Test Case	Test Scenario
Test case consist of test case name, Precondition, steps / input condition, expected result.	Test scenario consists of a detailed test procedure. We can also say that a test scenario has many test cases associated with it. Before executing the test scenario we need to think of test cases for each scenario.
Test cases are low level actions and it can be derived from test scenarios.	Test scenarios are the high level classification of test requirement grouped depending on the functionality of a module and it can be derived from use cases.
Test case is give detailed information about if any pre-condition, what to test, how to test and expected result etc.	Test scenario is one liner statement which tell us about what to test.

[beginner-tutorial-guide/](#)

Test case means
detailed documenting
the cases which help
executing while
testing.

Test Scenario means
talking and thinking
requirements in detail.

Test cases are set of
steps which
performed on system
to verify the expected
output.

Test scenario is thread
of operations.

Test cases are more
importance in case
where development is
happening onsite and
QA is happening Off
shored. It will help to
understand and make
both developer and QA
in sync.

Test scenarios are more
important when time to
write test cases is no
sufficient and team
members are agree with
the detailed one liner
scenario.

[beginner-tutorial-guide/](#)

Writing test cases is one time effort which can be used in future while executing regression test case. While reporting defects it will help tester to link the defect with test case id.

In new software testing generation it is new idea and time saver activity. The addition and modification (easy maintainability) of test scenarios is easy and independent on specific person.

The detailed test case document is full proof guard for new software tester. If developer missed something then it is easy to catch while executing these full-proof test cases.

One of the most positive point about test scenario is good test scenarios reduces the complexity and repeatability of product.

It requires more time and resources due to detailed test case which talks about how to test and what to test.

If the test scenario not detailed enough then it might take some time to discussion and understand what test scenario is exactly talking about.

Sample Requirement: Use case ID: UC0001 –

Verify and validate the end to end functionality of e-commerce website. Only register customers should be login into site using valid credentials and place the order.

Test Scenario:

Use case ID / Requirement ID	Scenario ID	Test Scenario	No of Test cases
UC0001	TS001	Validate the login functionality of site to make sure that only registered customers can login into site.	6
UC0001	TS002	Validate the order placing functionality of site.	8

<http://e8c5h7a9.stackpathcdn.com/wp-content/uploads/2014/10/Test-Cases-VS-Test-Scenario1.png> *[Click on the image to enlarge the image]*

Test Cases:

Scenario ID	Test case ID	Test case	Test case Description	Test Step	Test step Description	Expected Result	Actual Result	Status	Comment
TS001	TC001	Validate Login Credentials	Test the login functionality of the e-commerce site to make sure that registered user is allowed to login into site using valid credentials.	Pre-Condition	1) Make sure that site under test is available and testable. 2) Make sure that required data for login is available.				
				Step 1	Launch the e-commerce application with the given URL: <Test Site URL>	The e-commerce site launched properly.	Site launched successfully.	Pass	
				Step 2	Navigate to Login page	Login page is displayed to user with Username and Password fields are displayed on the page.	Login page loaded successfully.	Pass	
				Step 3	Enter valid Username in username field.	Username field should be editable and accept the username.	Username input accepted	Pass	
				Step 4	Enter valid Password in Password field.	Password field should be editable and accept the password and display as star or dot.	Password input displayed in dot and accepted	Pass	
				Step 5	Click on login button.	User should login into site and navigated to home page.	User navigated Checkout page.	Fail

We can also say Test Case is every action to be performed or every condition to be tested and Test Scenario defines an Activity to be performed. There will be n conditions and n steps, n ways to perform an activity which means Test Scenario will have multiple test case.

Praneeti

31 OCT 2014

The sentence mentioned in above article is self explanatory “Test Case is ‘How to be tested’ and Test Scenario is ‘What to be tested’”. Thanks for sharing such wonderful article...

-Praneeti

Rahul

31 OCT 2014

Nice points covered in the difference between test cases and test scenarios, thanks for sharing wonderful post...
