Peer-graded Assignment: Applying the Agile Mindset and Techniques

You've finished your peer reviews

Well done! You sent 4 peers feedback that will help them. If you have time, please review one or two more. Every review you do helps another peer complete the course!

Your fellow learner has submitted their assignment anonymously and your review will be anonymous to them. All

Blue Bank's Innovative Remote Cheque Deposit Capture by Anonymous Learner April 13, 2022 ♡ Like 🏳 Flag this submission

PROMPT Blue Bank has always used the traditional waterfall method to deliver IT projects. Harold Johnson and the company leadership have suggested that you also use traditional methods to build the software. You have a different idea. You think agile would be better In the space below, make a case to Harold as to why we should switch to agile (explain why using agile is a better choice for this project/situation). Be sure to support your argument by referring back to the case study text. The agile methodology approach would be the most efficient project management method to deliver the innovative cheque deposit capture system Blue Bank wish to implement. It would not only allow the project team to deliver a demonstration of the current state

teams concurrently and in collaboration with

waterfall methodology.

but the explanation was not appropriate. 2 pts
 Identified this as the reason for choosing Agile, and the explanation was appropriate. Any other feedback you have for the learner in terms

of the quality, completeness, or correctness of the

Assume Harold liked your argument and agreed to proceed with agile on this project. In his reply, Harold asked for further guidance on how to move forward. Please reply back with the following: 1. What things will have to change on how this team operates and how key stakeholders interact or engage on this project. (Hint: as you have learned, for agile to be successful there are certain prerequisites and it poses certain challenges for leadership/business stakeholders

The team is new to Agile and based on prerequisites for agile to be successful, please specify if you and your team need any help or

training etc. If none, please state that. The team will need to interact more horizontally and with eachother. This means constant collaboration and sharing of ideas, instead of working alone in the office on different floors. We would suggest moving to the same floor to increase collaboration. The key stakeholders would also need to be involved with all steps of the project, providing feedback, input and recommendations to the project team. The leaders will need to interact with staff more for this project to be of the highest success. 2. The team and I would need training in mobile development, performance testing and user experience training. However, much of this can be

sit on different floors, and, for agile to succeed, it will be beneficial to get the entire team to sit/work

O pts
Didn't identify this need. 2 pts Identified the need, but didn't give the correct Identified the need and gave the correct

Identified the need, gave the correct argument, and suggested a potential solution. The solution included details like establishing a team room,

Did the learner identify that business stakeholders currently sit in a different building and in agile they have to engage with the development team throughout the process? Business stakeholders cannot just hand-off requirements to the team. To done during sprint times to allow for a more efficient succeed, these stakeholders must collaborate with and cheaper overall project. Also a short session on key agile processes such as automated testing and continuous integration will be very useful to the team. the development team on daily basis.

O 3 pts
Valid argument, covering all aspects, and very 4 pts
 Valid, complete, and correct argument. In addition, had some out of the box reasoning, and also quoted some additional details to support arguments.

Any other feedback you have for the learner in terms of the quality, completeness, or correctness of the

Harold is pretty impressed by your response and has approved all of your recommendations in previous two responses. He then re-iterated the key criteria for success and asked you if he and his management team should expect anything different from this

project in terms for tracking and status updates. Are there any project constraints laid out in the case study that need to be changed/managed since you will be using agile and, in agile, planning, estimation and tracking happens differently? Hint: The case study implies certain project constraints/expectations around cost, timeline, other factors that need to managed/changed. By implementing agile, one must note that the timeframe will be need to altered fortnightly in order to accommodate for the changes at the end discovered in the two week sprint retrospective meetings. We, of course will use financial planning to stick to the budget as best as possible, but it must be noted that during agile, changes occur frequently which are welcomed but can sometimes drive up the overall cost of the project. By managing this budget and the processes we use, we aim to sick within the estimates given prior.

RUBRIC Did the learner identify that agile approaches to estimation, planning and tracking are different, so management should expect to engage with the team differently?

Didn't identify this. O 2 pts Identified the need but didn't give correct arguments like (multi-level planning, less upfront but frequent, just in time, just enough, etc) Identified the need and gave the correct Identified the need, gave the correct argument, and suggested a potential solution and additional details. Did the learner specify that the initial cost and time

estimates (\$500,000 and 6 months, respectively) will

need to be flexible to allow the team to change the plan based on what we learn? O pts
The learner didn't identify this. O 2 pts Identified the need but didn't give correct arguments like adapt and replan, embrace change. 4 pts
 Identified the need and gave the correct argument

5 pts Identified the need, gave the correct argument, and suggested a potential solution and additional details Did the learner specify that Harold and his leadership team must engage more frequently and attend sprint review meetings? If they need to get a feel for the

project, they can always attend the stand-ups.

O pts
The learner didn't identify this. 4 pts Identified the need. 5 pts
 Identified the need and provided additional

Rate the overall quality of the response. O pts Invalid arguments. Valid arguments, but they are incomplete. 2 pts
