	Which came first, the instance or the class?	
٠.		1 point
	O function	
	class	
	O method	
	Oinstance	
2.	In Object Oriented Programming, what is another name for the "attributes" of an object?	1 point
	Oforms	
	Oportions	
	messages	
	fields	
	O methods	
3.	At the moment of creation of a new object, Python looks at the definition to define the structure and capabilities of the newly created object.	1 point
	○ cache	
	O instance	
	O method	
	class	
	O constructor	
4	Which of the following is <b>NOT</b> a good synonym for "class" in Python?	
٠.		1 point
	O blueprint	
	O template	
	direction     pattern	
	O pattern	
_	What does this Python statement do if PartyAnimal is a class?	
٠.	1 zap = PartyAnimal()	1 point
	Subtract the value of the zap variable from the value in the PartyAnimal variable and put the difference in	
	Subtract the value of the zap variable from the value in the PartyAnimal variable and put the difference in zap	
	_	
	<ul> <li>Use the PartyAnimal template to make a new object and assign it to zap</li> <li>Copy the value from the PartyAnimal variable to the variable zap</li> </ul>

It shows the methods and attri	n show when we pass an object into it as a parameter?	1 poin
It shows the methods and attri		1 poir
It shows the number of parameters	butes of the object	
O it shows the number of parami	eters to the constructor	
O It shows the type of the object		
O It shows the parent class		
11. Which of the following is rarely use	d in Object Oriented Programming?	1 poir
Oconstructor		
Method		
Attribute		
<ul><li>Destructor</li></ul>
